

Greetings from Technology,

Technology for this school year will have some enriching learning opportunities for Core Knowledge students. My teaching focus will be to prepare students with 21st century skills through the use of technology.

Technology instruction in the lab will include keyboarding and word processing skills. Students will learn how to use Microsoft Word, Excel, and Power Point. Students will use a variety of software applications and Internet tools to develop critical thinking, brain mapping, and writing skills. Collaborative learning and problem solving opportunities will prevail in the classroom.

The student computer lab has been equipped with 25 brand new Apple Computers. These computers will provide iLife tools for creating multi-media projects. In addition to the new computers, students will have access to a scanner, digital cameras, video cameras and a SmartBoard. The focus for learning will be through the integration of Core Knowledge curriculum.

I look forward to the enriching learning experiences for the coming school year.

Susie Stewart
Technology Teacher
